

COURSE: EAS B3090 / EES 79903

TERM: Fall 2019

INSTRUCTOR: James Booth

Graduate Student Special Assignment

On the class syllabus, the homework is worth 20% of the grade, however, this is for undergraduates only.

For graduate students:

- You do not have to turn in the homework – I will not grade it.
- The 5% additional grade from in-class participation does not apply.
- 20% of your grade will be based on the assignment described below.

Term Paper/Project

Design your own project that best fits your graduate career goals.

Examples include:

- (a) A term paper, 6 pages in length that relates your research focus (or interests) to a particular component of the course.
- (b) A set of two lectures that you would give as an instructor for an introductory course in earth system science.

Important Dates:

- Sept 30: last day to decide which option you choose. **You must email me your choice.**
- Oct 31: By this date, we should have met at least once to discuss your project plan. It is your responsibility to arrange this meeting with me, via email.
- Dec 15: due date for the paper/project
